**Articles**

The following journal articles are available from the Library and Knowledge Service electronically or in print. Please follow links to access full text online, contact me to order copies, or call into your nearest library.

**Antibiotic therapy for pelvic inflammatory disease.**
Savaris RF. *Cochrane Database of Systematic Reviews* 2017;(4):CD010285.
[We found no conclusive evidence that one regimen of antibiotics was safer or more effective than any other for the cure of PID, and there was no clear evidence for the use of nitroimidazoles (metronidazole) compared to use of other drugs with activity over anaerobes. Moderate-quality evidence from a single study at low risk of bias suggested that a macrolide (azithromycin) may be more effective than a tetracycline (doxycycline) for curing mild-moderate PID.]

**Intravesical electromotive drug administration for non-muscle invasive bladder cancer.**
Jung JH. *Cochrane Database of Systematic Reviews* 2017;(9):CD011864.
[While the use of EMDA to administer intravesical MMC may result in a delay in time to recurrence in select patient populations, we are uncertain about its impact on serious adverse events in all settings.]
Freely available online

**Probiotics for preventing urinary tract infection in people with neuropathic bladder.**
Toh SL. *Cochrane Database of Systematic Reviews* 2017;(9):CD010723.
[It is uncertain if probiotics prevent urine infections in people with bladder dysfunction after a nervous system injury. Further robustly designed studies are necessary.]
Freely available online
Traditional suburethral sling operations for urinary incontinence in women.
[The results showed that there is not enough information on which to judge whether traditional sling operations are better or worse than any other treatments. Long-term results are awaited.]
Freely available online

Urethral injection therapy for urinary incontinence in women.
Kirchin V. Cochrane Database of Systematic Reviews 2017;(7):CD003881.
[The review of 14 trials, which included 2004 women, found some limited evidence that urethral injection therapy can relieve stress incontinence in women. Other treatments such as surgery might be better. Using the women's own fat tissue as the agent injected can cause serious complications.]
